**Classix II Triple-Distilled Ethyl Cyanoacrylate Adhesive**

Application Instructions

1. Prepare head as you would for any border/track system. Cut hair down to about 1/8" high and 1" wide.
2. Clean entire head with Remove-All (Exfoliating Gel) to remove all oils, residue and dead skin from head and track area.
3. Clean the perimeter of the polyurethane border making sure that it is free of all hair, oils, adhesives and old tape residue.
4. Apply tape to the polyurethane the inside border of the unit. Usually that is from temple to temple where the Classix II adhesive is to be applied.
5. Apply Classix II adhesive in a small circular motion to the center of the tape. Do not flood the tape - LESS is better than more. Do not run Classix to the edge - just small circles down the middle of the tape.
6. Press unit down to the hair and hold for 30 seconds.
7. After using, hold the bottle upright and give the sides a slight squeeze to clear the tube, wipe the end of the tube clean and replace the pinned over-cap.

*NOTE:*

All adhesives cure rapidly on the surface, while the underside takes much longer. Advising the client not to wash his hair for 24 hours can dramatically lengthen the holding power of any adhesive.
